

Hoe hartfalen te herkennen

Mark Valk, huisarts onderzoeker

Disclosure

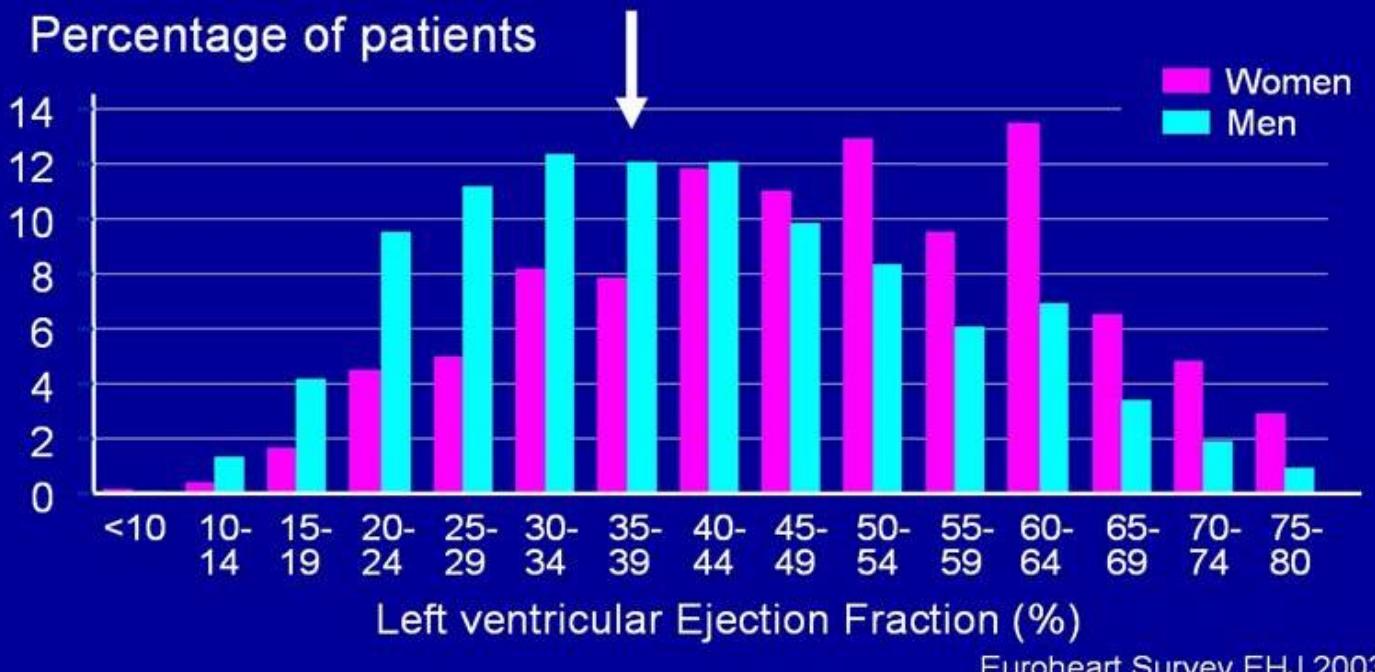

- Geen belangenverstengeling

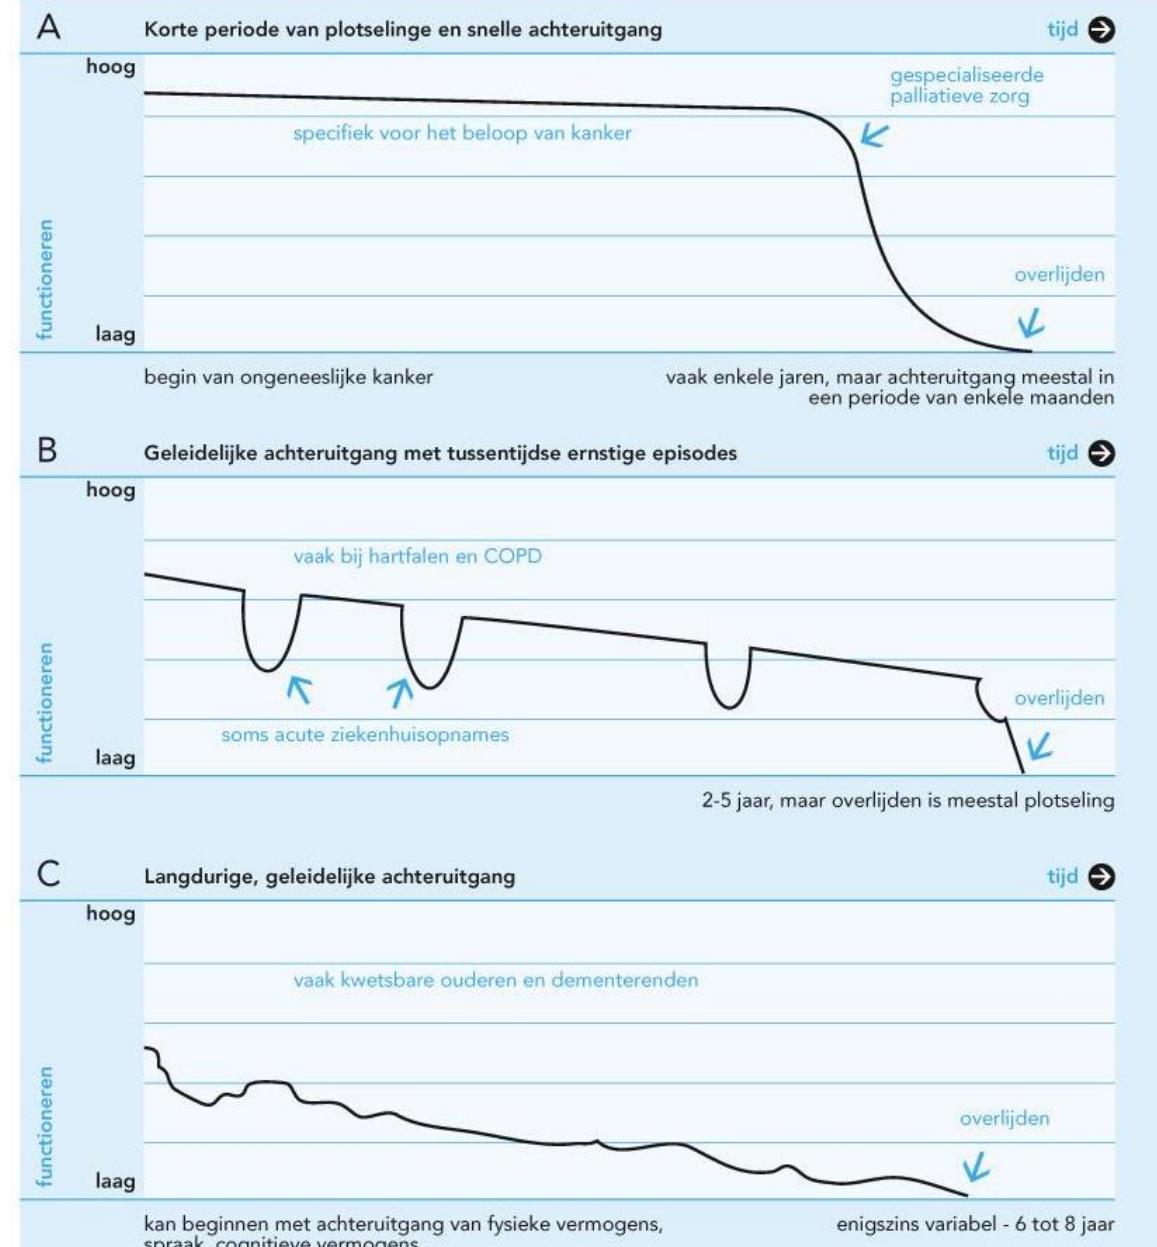

- Komt het vaak voor?
- 0,8% tussen de 55 en 64 jaar
- 3% tussen de 65 en 74 jaar
- 10% tussen de 75 en 84 jaar
- 20% van 85 jaar en ouder

Hartfalen met en zonder verminderde LVEF (45%)

Euroheart failure survey: distribution of ejection fraction

11,015 patients in 115 hospitals in 24 countries

Figuur 2

Ziekterejcten (Uit: Murray, 2005)

Hartfalen

De patient

- Klachten
 - Moe
 - Dyspneu
 - Oedeem
 - nycturie

De arts

- **Anamnese**
 - Verminderde inspanningstolerantie
 - Nycturie
 - Nachtelijke dyspneu
- **Lichamelijke Symptomen**
 - Crepiteren
 - Verplaatste ictus
 - CVD
 - Oedeem/lever

- CV-voorgeschiedenis
- MI, revascularisatie, RR
- Diuretica

Hartfalen in de 1^e lijn

- Kennen de huisartsen alle patiënten met hartfalen in hun praktijk?
- Hoeveel zijn dat er per HA-praktijk?
- Is hartfalen te behandelen?

Kent de huisarts al zijn/haar patiënten met hartfalen?

Research

Mark J Valk, Arend Mosterd, Berna DL Broekhuizen, Nicolaas PA Zuihoff, Marcel AJ Landman, Arno W Hoes and Frans H Rutten

Overdiagnosis of heart failure in primary care: a cross-sectional study

Kent de huisarts al zijn/haar patiënten met hartfalen?

Research

Mark J Valk, Arend Mosterd, Berna DL Broekhuizen, Nicolaas PA Zuijthoff, Marcel AJ Landman, Arno W Hoes and Frans H Rutten

Overdiagnosis of heart failure in primary care: a cross-sectional study

Hartfalen; 63,5%, mogelijk hartfalen; 19,2%, geen hartfalen; 17,3%

Onderdiagnose hartfalen

- COPD Rutten FH, Unrecognized heart failure in elderly patients with stable chronic obstructive pulmonary disease. *Eur Heart J.* 2005 (20,5%)
- DM Boonman-de Winter LJ, High prevalence of previously unknown heart failure and left ventricular dysfunction in patients with type 2 diabetes. *Diabetologia* 2012 (27,7%)
- Dyspneu van Riet ES, Prevalence of unrecognized heart failure in older persons with shortness of breath on exertion. *Eur Heart J.* 2014 (15,7%)
- Kwetsbare ouderen van Mourik Y, Unrecognized heart failure and chronic obstructive pulmonary disease (COPD) in frail elderly detected through a near-home targeted screening strategy. *J Am Board Fam Med* 2014 (33,5%)

COPD en HF

- Gemeenschappelijke oorzaak
- Vind je de een, vergeet je de ander!
- Serieel vs. multiple (huisarts vs. specialist)
- Is de exacerbatie wel de oorzaak van de aangetoonde aandoening?

Vroeger

Vroeger

- Astma cardiale
- Ad hoc geneeskunde
- Aderlaten
- Rust

Vroeger en nu

Vroeger

- Astma cardiale
- Ad hoc geneeskunde
- Aderlaten
- Rust

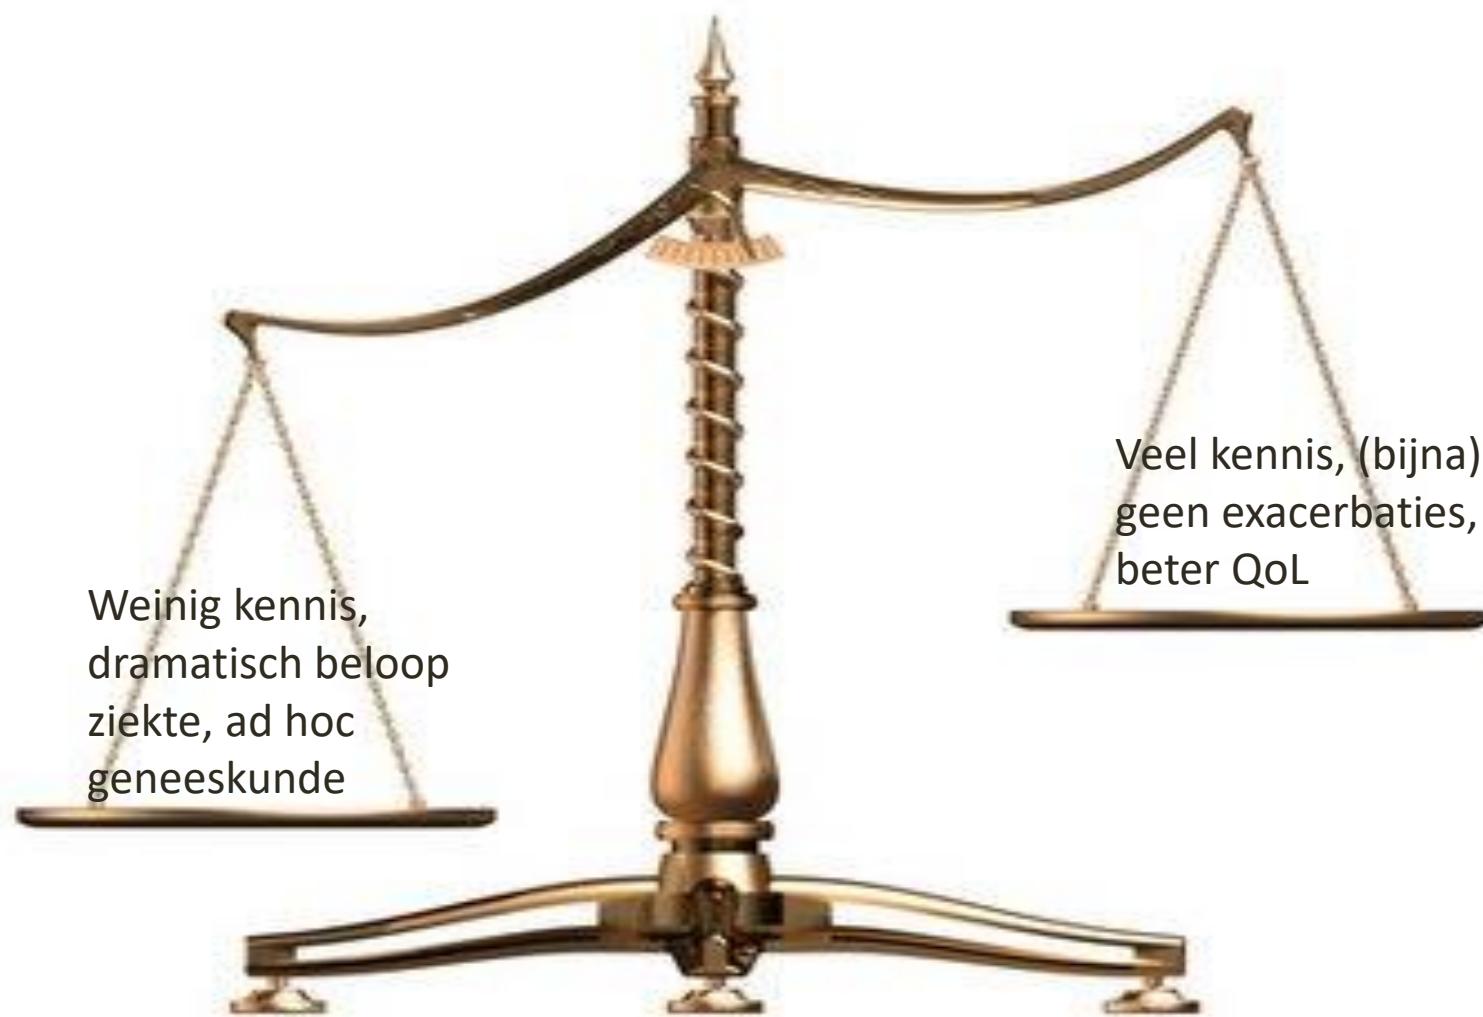

Nu

- Inspanningsintolerantie
- Diagnostisch traject
- Instellen medicatie
- Monitoren
- Bewegen

Deskundigheidsparadox

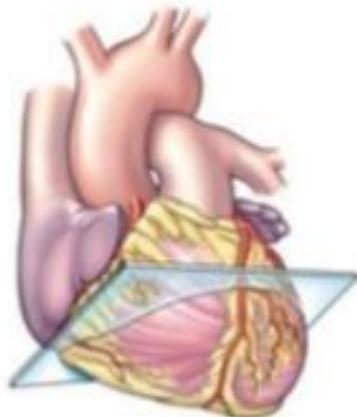

Hartfalen in de 1^e lijn

- 2350 patiënten
- 2% HF
- Prevalentie ±25-40 per praktijk
- Incidentie ±5 per jaar per praktijk
- Systolisch en diastolisch HF gelijk verdeeld

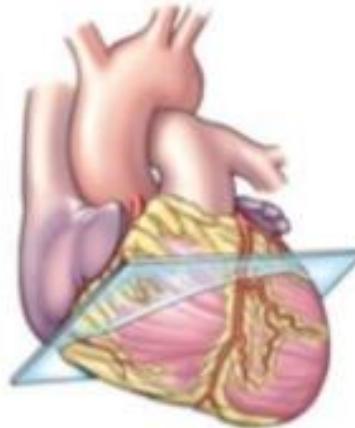

Onderscheid hartfalen zinvol?

- Systolisch
- Diastolisch

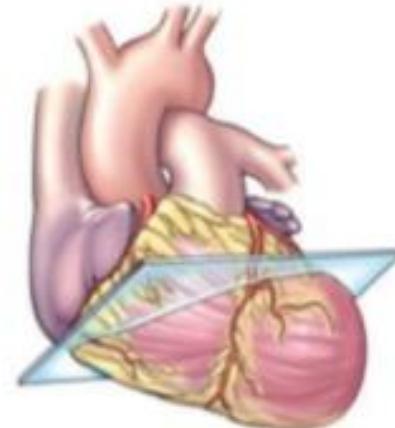

Systolisch en Diastolisch Hartfalen

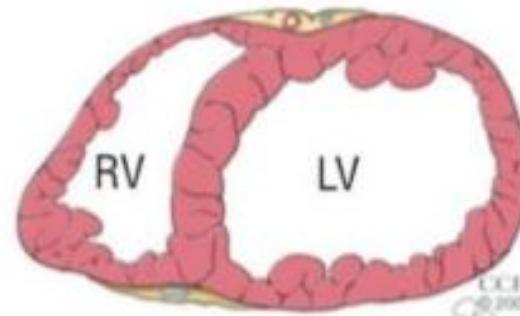

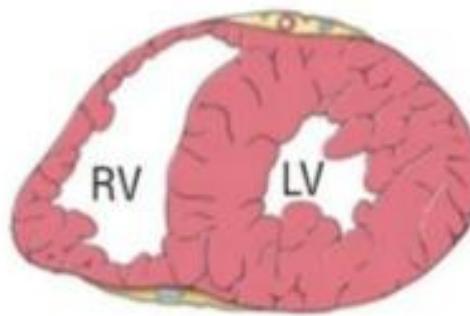

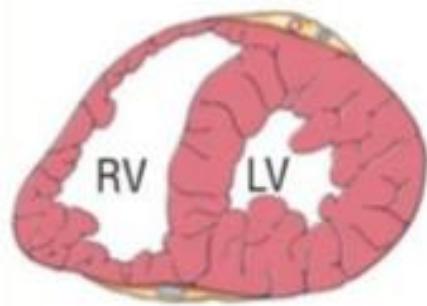

a

b

c

Systolisch en diastolisch falen

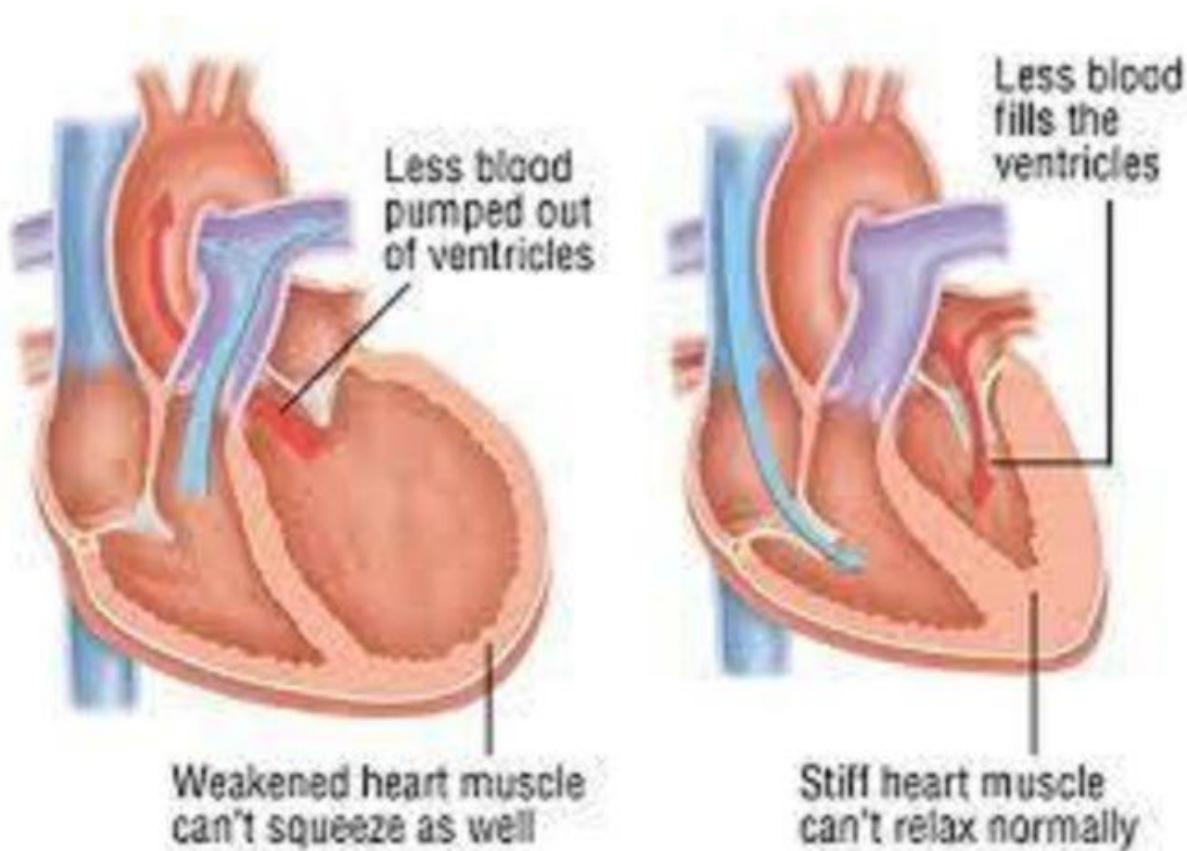

Table 3. Co-morbidities and drug treatment of 429 patients with panel-confirmed heartfailure, divided in those with reduced and preserved ejection fraction

| | HFrEF (n=222) | HFpEF (n=207) | p-value |
|-----------------------------|---------------|---------------|---------|
| Mean age in years (SD) | 74.5 (11.3) | 79.9 (8.7) | <0.001 |
| Male sex | 57.2 | 37.7 | <0.001 |
| Angina pectoris | 14.0 | 23.7 | 0.10 |
| Prior myocardial infarction | 47.7 | 16.4 | <0.001 |
| Atrial fibrillation | 35.6 | 62.3 | <0.001 |
| Hypertension | 45.5 | 64.7 | <0.001 |
| Diuretics | 76.6 | 73.4 | 0.45 |
| ACE-inhibitors or ARBs | 69.4 | 53.6 | <0.001 |
| β-blockers | 59.0 | 52.7 | 0.15 |

Ponikowski P, Voors AA, Anker SD, Bueno H, Cleland JG, Coats AJ et al. 2016 ESC Guidelines for the diagnosis and treatment of acute and chronic heart failure: The Task Force for the diagnosis and treatment of acute and chronic heart failure of the European Society of Cardiology (ESC).. Eur J Heart Fail 2016;

CONTRA INDICATIONS WHEN STARTING

Contra indications ACE-i

- Angio-oedema in medical history
- Kidney artery stenosis bilateral
- Potassium > 5.0 mmol/L
- Creatinine > 220 µmol/L
- Severe aortic stenosis

Contra indications ARB

- Same as ACE-i, except angio-oedema
- Combination ACE-i and mineralocorticoid

Contra indications β-blocker

- Asthma (COPD is no contra indication)
- 2^o/3^o degree AV-block, sick sinus syndrome, sinus bradycardia

Contra indications MRA

- Potassium > 5.0 mmol/L
- Creatinine > 220 µmol/L
- Potassium sparing or supplying drug
- Combination of ACE-i and ARB

No NSAID's

WHAT IF

| | Diuretics | | ACE-i | | β-blocker | |
|----------------------------------|-----------|---|-------|-----|-----------|-------|
| | ↑ | ↓ | stop | 1/2 | ↓ | not ↑ |
| Potassium > 5.5 mmol/L | | | • | | | |
| eGFR < 30 ml/min | | | | • | | |
| eGFR < 10 ml/min | | | • | | | |
| Vertigo | | | | | | • |
| Progression oedema | • | | | | | • |
| Syst. blood pressure < 100 mm Hg | | • | | | | • |
| Clinical decline | • | | | | • | |
| Pulse < 50/min | | | | | | ECG |
